

# Problems 03

Due: Friday, 27 January 2023 before 17:00 EST

P3.1. The *absolute value* function  $|\bullet| : \mathbb{Z} \rightarrow \mathbb{N}$  is defined, for any integer  $m$ , by

$$|m| := \begin{cases} m & \text{if } m \geq 0, \\ -m & \text{if } m < 0. \end{cases}$$

- (i) Let  $n$  be a nonnegative integer. For any integer  $m$ , prove that  $-n \leq m \leq n$  if and only if  $|m| \leq n$ .
- (ii) For any two integers  $m$  and  $n$ , show that

$$||n| - |m|| \leq |n + m| \leq |n| + |m| .$$

P3.2. Let  $k$ ,  $m$ , and  $n$  be integers. Verify that  $\gcd(km, kn) = |k| \gcd(m, n)$ .

P3.3. Let  $k$ ,  $m$ , and  $n$  be positive integers. When  $m^k$  divides  $n^k$ , establish that  $m$  divides  $n$ .
